

## LMS Locomotive Livery Key List

The following Livery Key List was compiled principally by the late David Jenkinson in company with his friend Bob Essery and published in their series of books 'An Illustrated History of LMS Locomotives' published by both Oxford Publishing Company and Silver Link Publishing on various occasions. It is reproduced here with the kind permission of Bob Essery and the estate of the late David Jenkinson together with the appropriate product references of the Fox Transfers range.

IPower classification digits for application to cab sides above or below the running numberset according to specimen are supplied with each sheet in appropriate colour, size and style.

To quote from the books' introduction to the list:

'The list should adequately define the majority of liveries carried by LMS locomotives from 1923 to 1947 and is, in essence, a tabulated summary of the livery section of Volume 1 (of the Essery/Jenkinson books). In virtually all the photographs in this volume, liveries are described by reference to the code letters and numbers in the left-hand column of this list, augmented by such other detail as seems relevant in context. The main variable (apart from totally non-standard paint schemes) was in the centre-to-centre spacing of the letters LMS during the 1928-47 period. Where a particular class of engine displayed some consistency in this respect, we shall say so in the narrative, but where much variety was evident, we shall either try to provide some sort of valid generalisations where we can, or simply draw attention to the problem.'
